Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The present invention is drawn to an amplification circuit utilizing a driver with pre-emphasis including: a first input signal path having a first D-type flip-flop and a delay circuit; a second input signal path having a first D-type flip-flop and a delay circuit; an output circuit, and first and second low voltage differential signal cells recited in claims 9-11, 14-19, 22-30, 34-37. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: the combination of all method steps as recited in claim 9; "the first input signal path... and outputting a delayed digital signal" and "the second input signal path ... outputting a delayed inverted digital signal" in combination of "the output circuit" as recited in claim 19; "the first input signal path ... outputting a delayed digital signal", "the second input signal path ... outputting a delayed inverted digital signal" in combination with "the first low voltage differential signal cell" and "the second low voltage differential signal cell" as recited in claim 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
